DETAILED ACTION

Election/Restrictions

1. This application is in condition for allowance except for the presence of claims 10-13 directed to method non-elected without traverse. Accordingly, claims 10-13 have been cancelled.

Allowable Subject Matter

2. Claims 1-9 are allowed.

With regards to claim 1:

- The allowable subject matter present in the claim is that when the vehicle drive command value is set via information from the vehicle speed measured, the vehicle speed sensor, and the target vehicle speed, there is a higher linearity than that of the vehicle driving force set by a non-linear portion of the non-linear setting map with respect to at least part of the vehicle drive command value equivalent to the non-linear portion. This has not been found to be taught or disclosed in the prior art found at this time. The two best references found by the examiner [Takagi et al. (US 6,389,348) and Hanada et al. (US 6,915,782)] disclose many of the aspects of applicant's claim one with regards to two modes, one being for no setting and the other for setting, and it is well known in the art for a vehicle map to be nonlinear, as is portrayed in these references. However, the lacking in a variation of the degree of linearity between the two settings has not been found to have been taught or disclosed in the prior art found at this

time. Therefore claim 1 and those that depend therefrom are found to contain allowable subject matter.
